How to do a Property Point Buffer Search

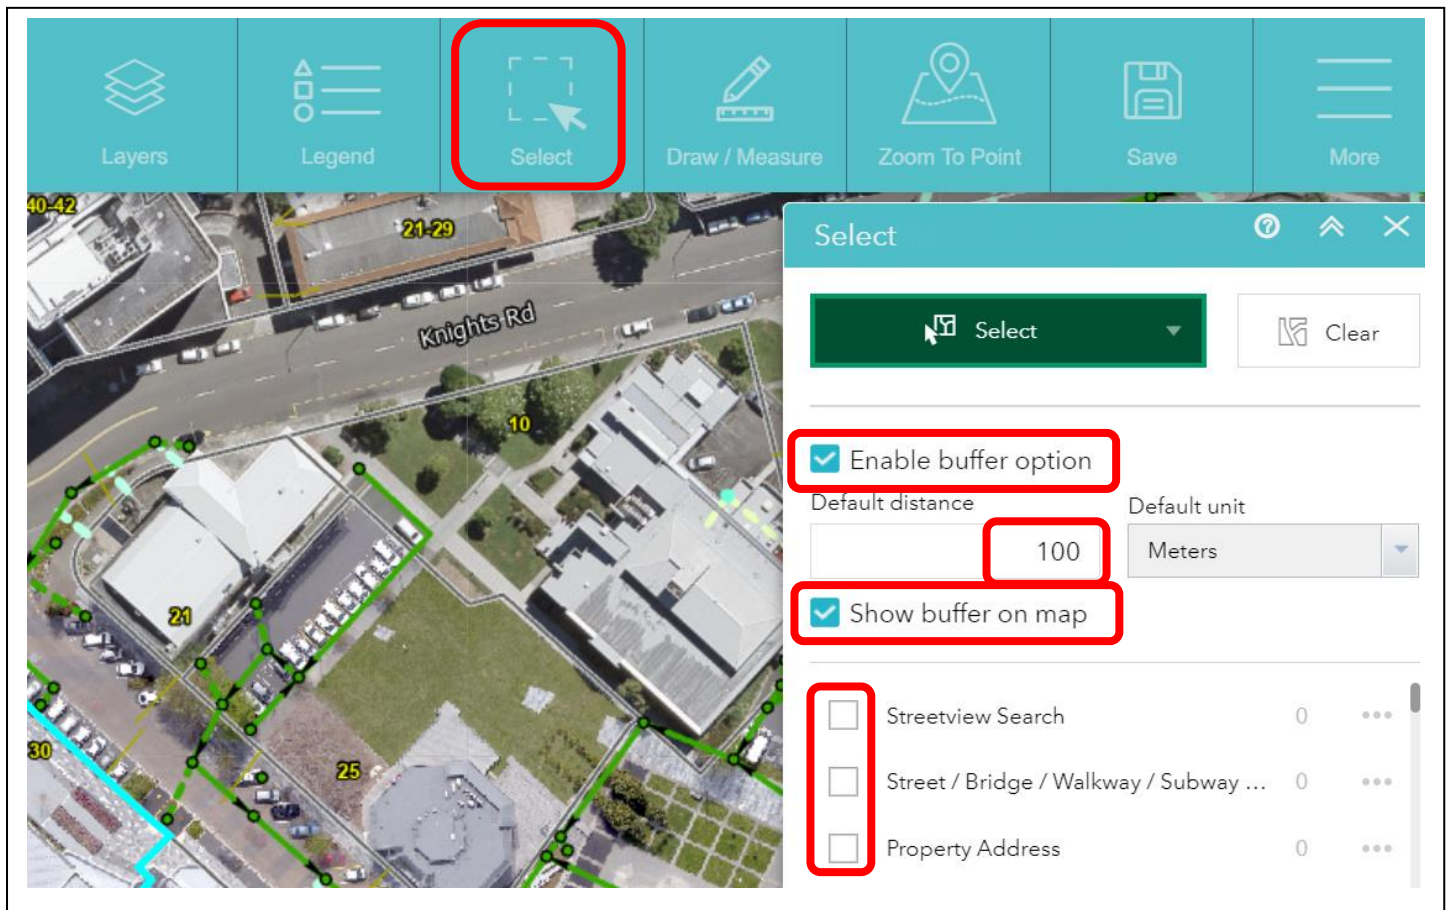

- Select the **Layers** widget
- Scroll down to the layer(s) you want to select, e.g. **Storm Network Assets** Group and turn it on

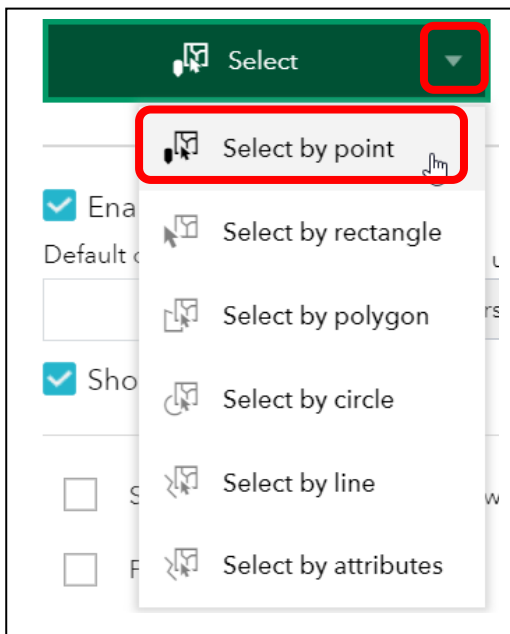

- Enter the property address in **Address Search** and zoom to it

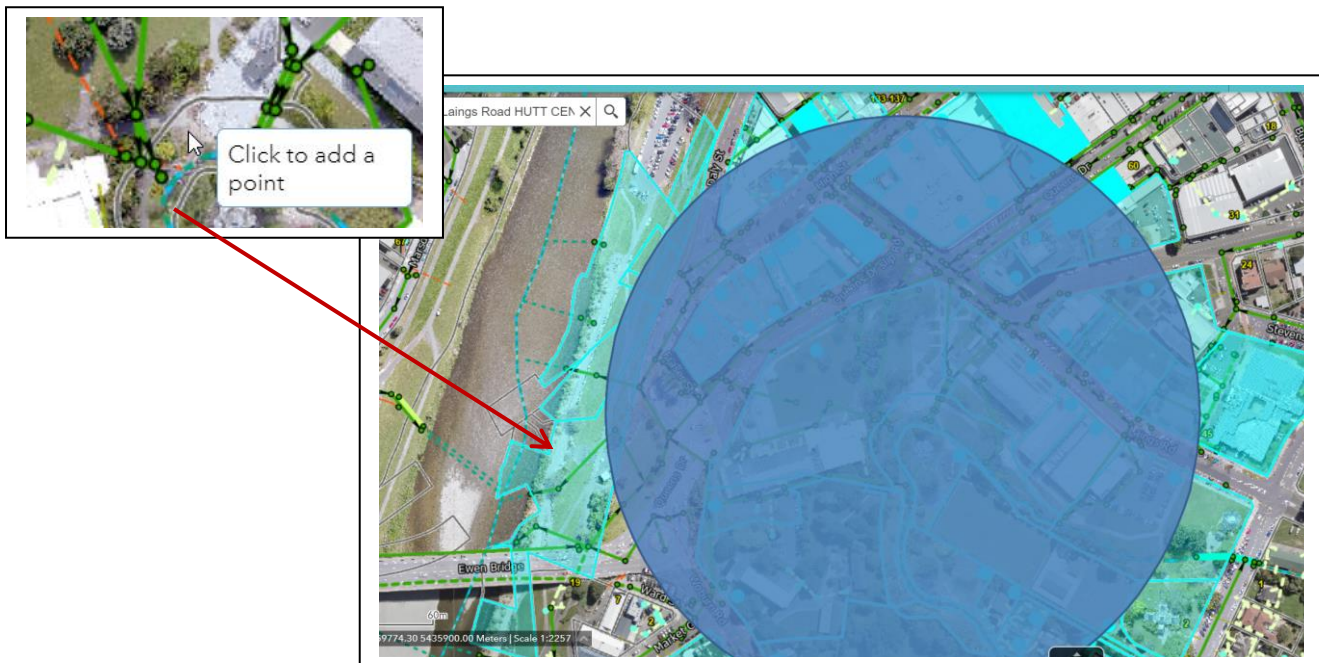

- Click on the **Select** widget
- Turn on **Enable buffer option**
- Enter the buffer distance, e.g. **100**
- Un-tick these layers:
 - Streetview Search
 - Street / Bridge / Walkway / Subway Names
 - Property Address
- Turn on **Show buffer on map**

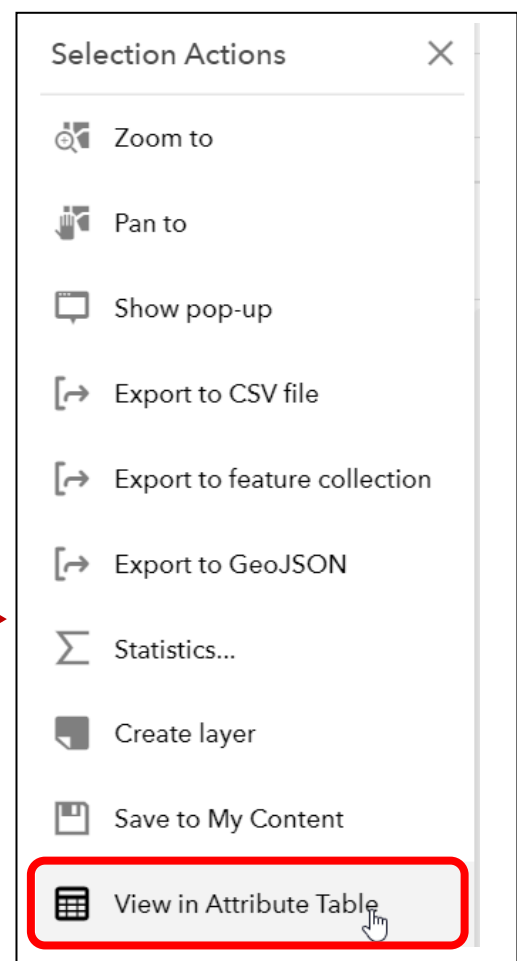

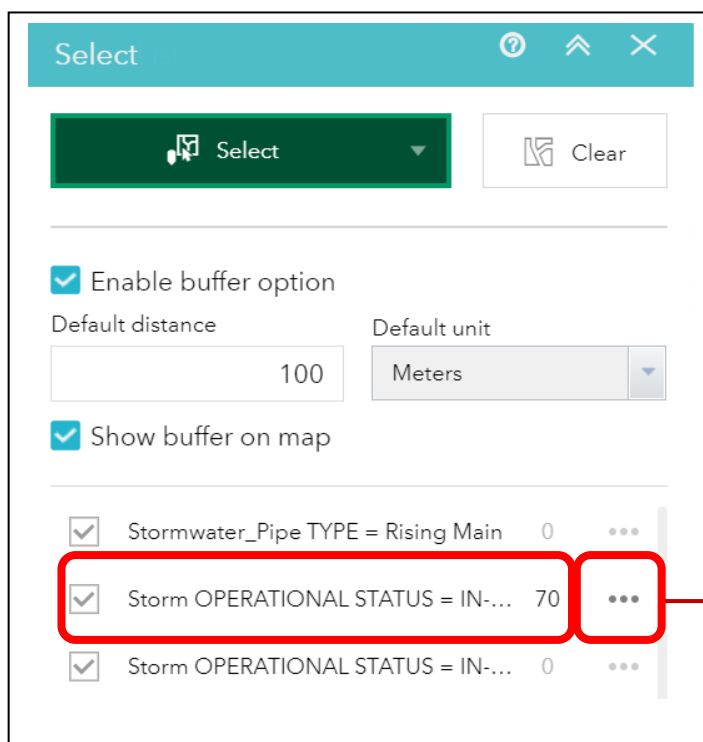

- Click on the drop-down arrow **Select**
- Choose **Select by point**

- Hover over the relevant property on the map & left-click to do the selection

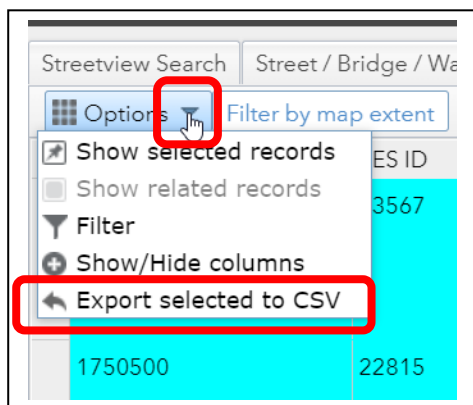

- Scroll down the list until you see the selected layers (the count of selected record for each will show)
- Click the ellipses next to the layer ...
- Select **View in Attribute Table**

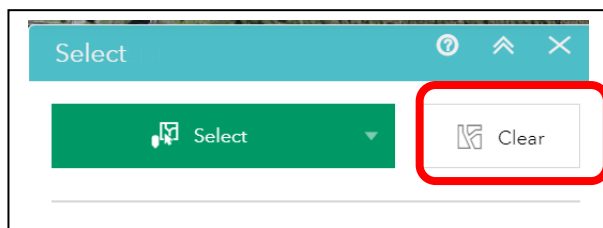

- This will open the **Attribute Table** to display the selected records visible on the map
 - If the count (bottom left) doesn't match with the selected count, zoom out until all the selected records are visible on the map.

OBJECTID	SHAPE	fme_geometry_0	asset_id	us_node_id	ds_node_id	link_suffix	operational_status	system_type	pipe_type	pipe_use
10429			HCC_SWP006882	HCC_SW011474	HCC_SW026735	1	In Use	Stormwater	Main	Gravity
10434			HCC_SWP006742	HCC_SW011478	HCC_SW011948	1	In Use	Stormwater	Main	Gravity
10451			HCC_SWP006854	HCC_SW011495	HCC_SW011951	1	In Use	Stormwater	Main	Gravity

- You can export the selected records to a CSV file

- Remember to **Clear** the selection when your done.

At this stage of selecting... if you require to add or delete specific properties...

- Press the **Shift key** while dragging the pointer on the map to **add selected features** to the selection.
- Press the **Ctrl key** while dragging the pointer on the map to **remove selected features** from the selection.

These steps can be viewed in the Widget function “?” option top right of panel display for full description.
